

AccuBreeze® FX

Cabled Fiber Unit

Increasing the Cost-Effectiveness and Range of Deployment Options for Access Networks

Product Description

The AccuBreeze® FX Cabled Fiber Unit (CFU) is a small, cost-effective acrylate fiber unit specifically designed for air-blown installation applications, using microduct systems in access networks. To construct the AccuBreeze FX CFU, up to 12 color-coded optical fibers are gathered to form a small fiber bundle. This fiber bundle is then placed in a soft acrylate inner layer that cushions the fibers. This inner layer is next encased in a protective hard acrylate outer layer in which glass spheres are embedded. This enhanced outer surface promotes low friction and increased aerodynamic drag for exceptional performance during air-blown installation.

Why the AccuBreeze FX CFU?

The AccuBreeze FX CFU offers a highly effective, low-cost fiber optic solution for access networks. The fiber unit's small size, light weight and enhanced surface help save on time and money with fast, cost-effective air-blown installation.

By using the air-blown installation method with inexpensive microduct networks, the AccuBreeze FX CFU further helps save on build costs by eliminating the need for expensive and disruptive excavation along with procuring costly rights-of-way.

The AccuBreeze FX CFU also helps service providers to defer and gain greater control over their initial network build investment by deploying fiber only as needed to meet demand. This capability helps providers in the future to consistently maintain the highest performance fibers in their networks and avoid the costs of procuring additional rights-of-way and constructing new ducts.
